

ABSTRACT OF THE DISCLOSURE

A device for displaying a parking permit and attaching the permit to a rear view mirror of a vehicle. The device may include a hook and pocket formed of a single piece of 5 substantially rigid and transparent plastic material. The hook may be formed as an open loop on a first end of the device. The hook may extend to the pocket to form a first planar wall. The second end of the device may be folded to form a second planar wall that is substantially parallel to 10 the first planar wall. The parking permit may be positioned between the first planar wall and the second planar wall. The rigidity of the device prevents the device from falling off of the rear view mirror so that the permit can be seen through the vehicle windshield.
